# CS 161: Fundamentals of Artificial Intelligence

Spring 2016– Assignment 5 – Due 11:55pm, Sunday, May 29

---

## Questions

This will be a non-coding homework. Please upload a digital copy of your solution on CCLE. Submitted files can be in either PDF or plain text. You may also submit a scanned PDF of a handwritten solution, but please ensure that the scanned file is *clearly legible*.

1. Consider the following sentences and decide for each whether it is valid, unsatisfiable, or neither:

- (a)  $(Smoke \Rightarrow Fire) \Rightarrow (\neg Smoke \Rightarrow \neg Fire)$
- (b)  $(Smoke \Rightarrow Fire) \Rightarrow ((Smoke \vee Heat) \Rightarrow Fire)$
- (c)  $((Smoke \wedge Heat) \Rightarrow Fire) \Leftrightarrow ((Smoke \Rightarrow Fire) \vee (Heat \Rightarrow Fire))$

Justify your answer using truth tables (worlds).

2. Consider the following:

*If the unicorn is mythical, then it is immortal, but if it is not mythical, then it is a mortal mammal. If the unicorn is either immortal or a mammal, then it is horned. The unicorn is magical if it is horned.*

- (a) Represent the above information using a propositional logic knowledge base (set of sentences in propositional logic).
- (b) Convert the knowledge base into CNF
- (c) Can you use the knowledge base to prove that the unicorn is mythical? How about magical? Horned?

Justify your answers using resolution by providing corresponding resolution derivations. Make sure to clearly define all propositional symbols (variables) first, then define your knowledge base, and finally give your derivations.

3. For each pair of atomic sentences, give the most general unifier if it exists:

- (a)  $P(A, B, B), P(x, y, z)$ .
- (b)  $Q(y, G(A, B)), Q(G(x, x), y)$ .
- (c)  $\text{Older}(\text{Father}(y), y), \text{Older}(\text{Father}(x), \text{John})$ .
- (d)  $\text{Knows}(\text{Father}(y), y), \text{Knows}(x, x)$ .

4. Consider the following sentences:

- John likes all kinds of food.
- Apples are food.
- Chicken is food.

- Anything anyone eats and isn't killed by is food.
- If you are killed by something, you are not alive.
- Bill eats peanuts and is still alive. \*
- Sue eats everything Bill eats.

For first-order syntax, feel free to use the following text file notation:  $\mid$  (for disjunction),  $\&$  (for conjunction),  $-$  (for negation),  $\Rightarrow$  (for implication),  $\Leftrightarrow$  (for equivalence),  $\exists$  (for existential quantification, e.g.,  $\exists x, y, \text{Loves}(x, y)$ ), and  $\forall$  (for universal quantification, e.g.,  $\forall x, y, \text{Loves}(x, y)$ ).

- Translate these sentences into formulas in first-order logic.
- Convert the formulas of part (a) into CNF (also called clausal form).
- Prove that John likes peanuts using resolution.
- Use resolution to answer the question, "What food does Sue eat?"
- Use resolution to answer the question, "What food does Sue eat?" if, instead of the axiom marked with an asterisk above, we had:
  - If you don't eat, you die.
  - If you die, you are not alive.
  - Bill is alive.

## Submission

- Submit all solution files **on CCLE**.
- Submit your solution in a file **named hw5.pdf or hw5.txt**.
- By submitting this homework, you agree to the following honor code.

You are encouraged to work on your own in this class. If you get stuck, you may discuss the problem with up to two other students, **PROVIDED THAT YOU SUBMIT THEIR NAMES ALONG WITH YOUR ASSIGNMENT. ALL SOLUTIONS MUST BE WRITTEN UP INDEPENDENTLY, HOWEVER**. This means that you should never see another student's solution before submitting your own. You may always discuss any problem with me or the TAs. **YOU MAY NOT USE OLD SOLUTION SETS UNDER ANY CIRCUMSTANCES**. Making your solutions available to other students, **EVEN INADVERTENTLY** (e.g., by keeping backups on github), is aiding academic fraud, and will be treated as a violation of this honor code.

You are expected to subscribe to the highest standards of academic honesty. This means that every idea that is not your own must be explicitly credited to its author. Failure to do this constitutes plagiarism. Plagiarism includes using ideas, code, data, text, or analyses from any other students or individuals, or any sources other than the course notes, without crediting these sources by name. Any verbatim text that comes from another source must appear in quotes with the reference or citation immediately following. Academic dishonesty will not be tolerated in this class. Any student suspected of academic dishonesty will be reported to the Dean of Students. A typical penalty for a first plagiarism offense is suspension for one quarter. A second offense usually results in dismissal from the University of California.
